

**Import Plugins:**

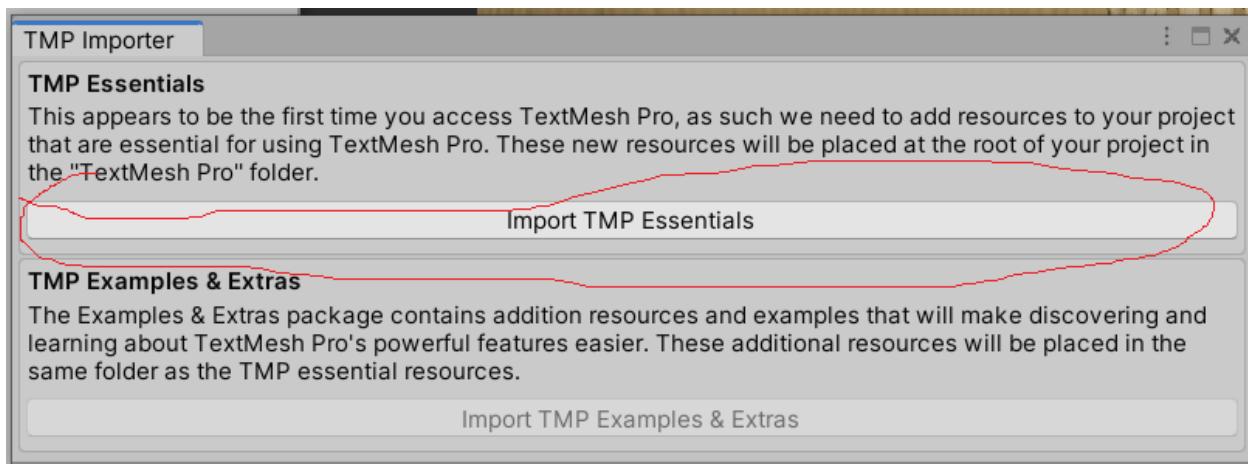

**Google Mobile Ads (admob): Support Admob: 9.5.0**

Download and run it: <https://github.com/googleads/googleads-mobile-unity/releases>

**LeanTween:**

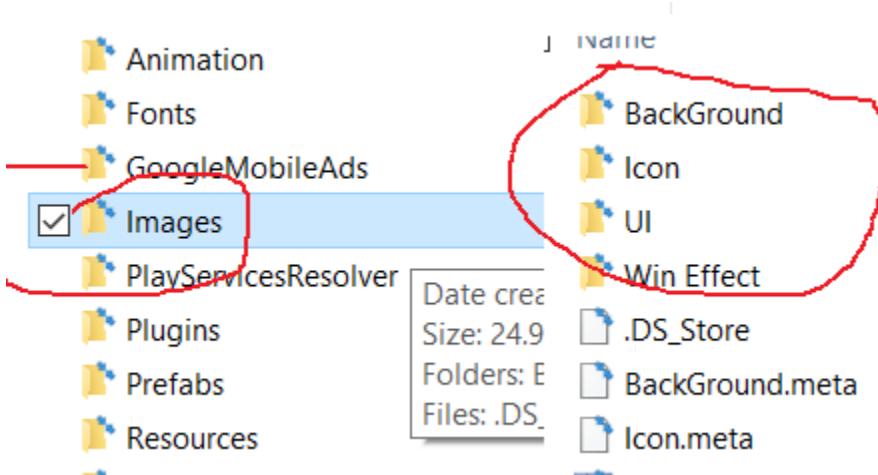

Download and import : <https://assetstore.unity.com/packages/tools/animation/leantween-3595>

**Import Textmesh Pro:** when click Play scene it will show window TMP Importer, click Import TMP Essentials (if this place button disable you need to delete TestMesh Pro folder before click Stage scene)

**How to reskin:**

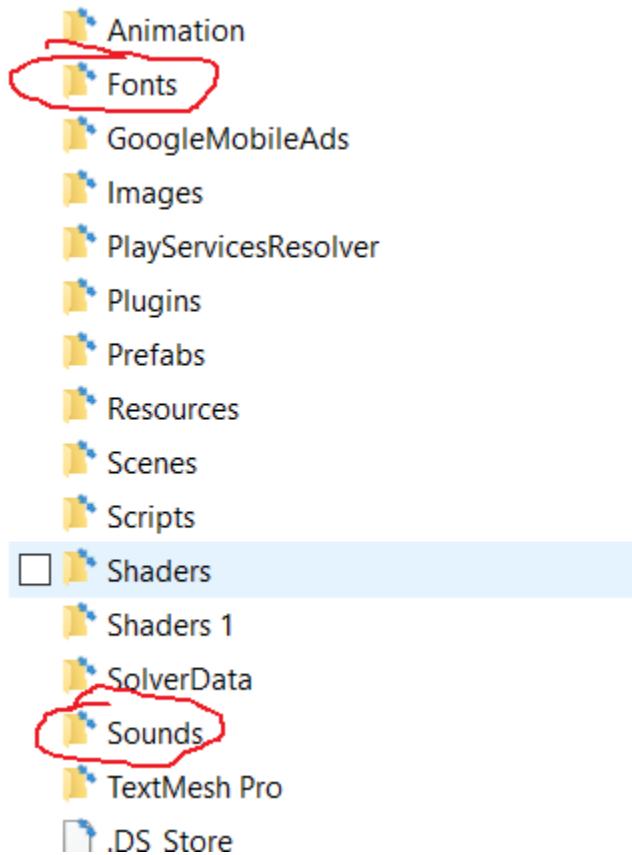

**Replace all .png in Images Folder**

**Change Audio and Fonts:**

replace all files .wav in Sound folder

replace .ttf in Fonts folder

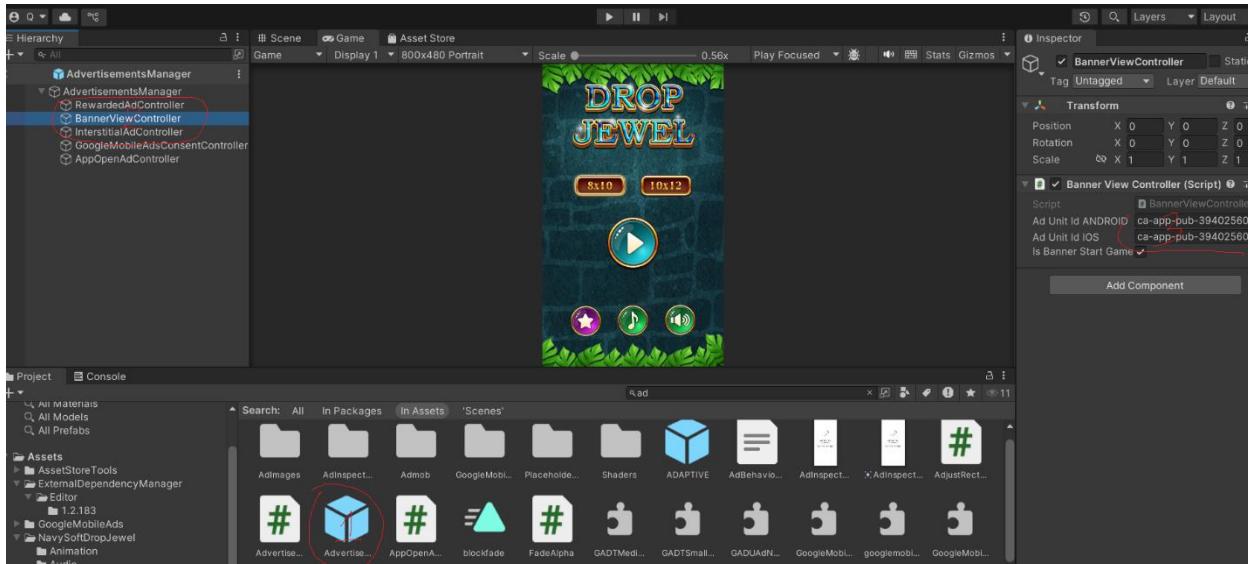

**1.Change admob key:**

Find prefab have name: Advertisementsmanager.prefab ( in this direct: \Resource\Prefab )

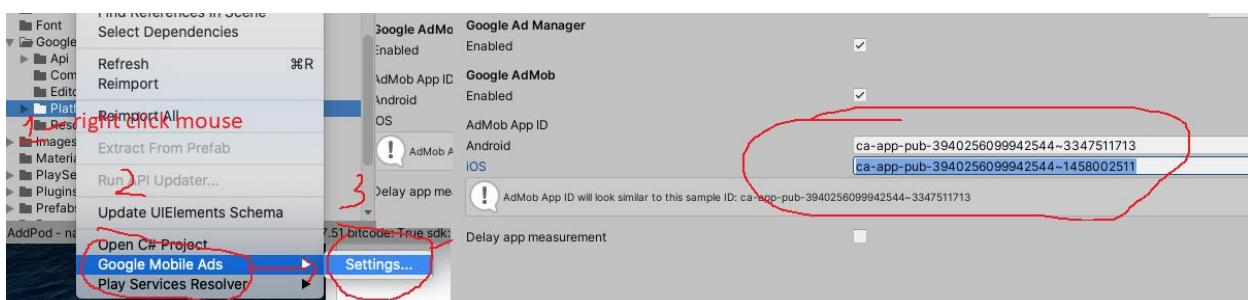

Double click Advertisementsmanager.prefab --> In Hierarchy choice BannerViewController, InterstitialAdController, RewardedAdController

**Change admob app id :** right click in Assets --> Google Moble Ads -> Settings...-->replace with your admob app id

Use your admob key replace at here:

(if you don't know create admob key how do please contact us. We will support)

(if you don't know create admob key how do please contact us. We will support)

**2.Change link rate:** change link rate in RateUSController.cs ( Scripts → RateUS → RateUsController.cs )

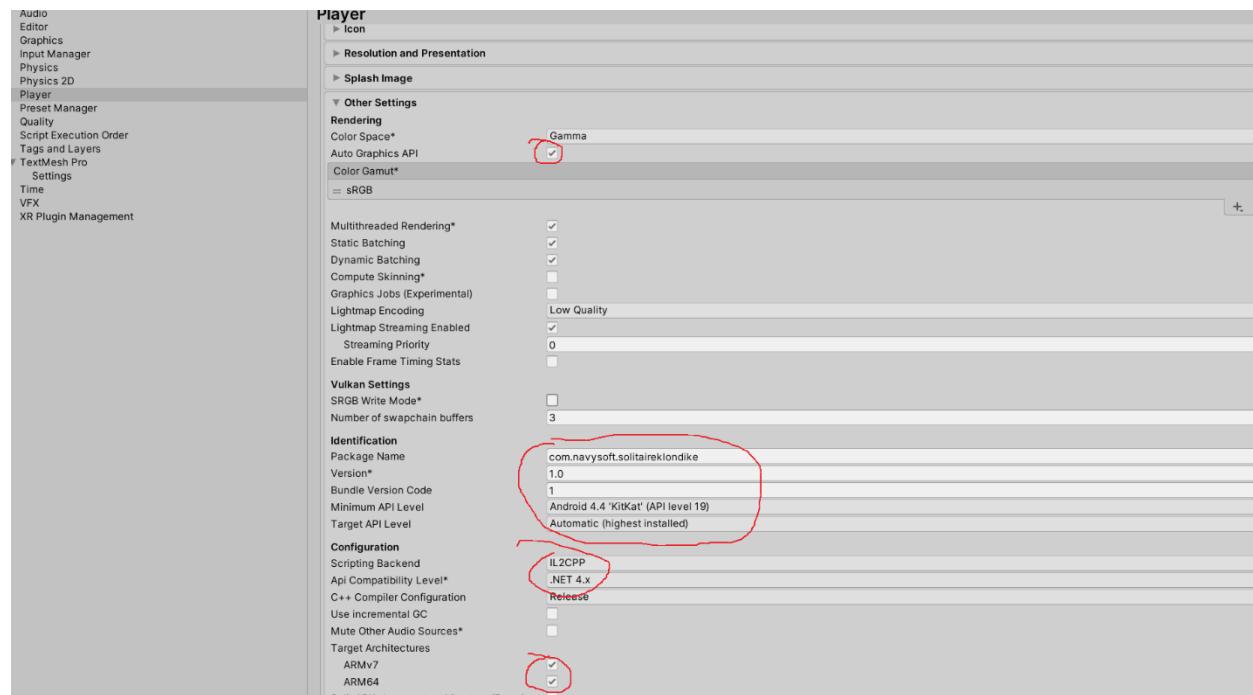

```

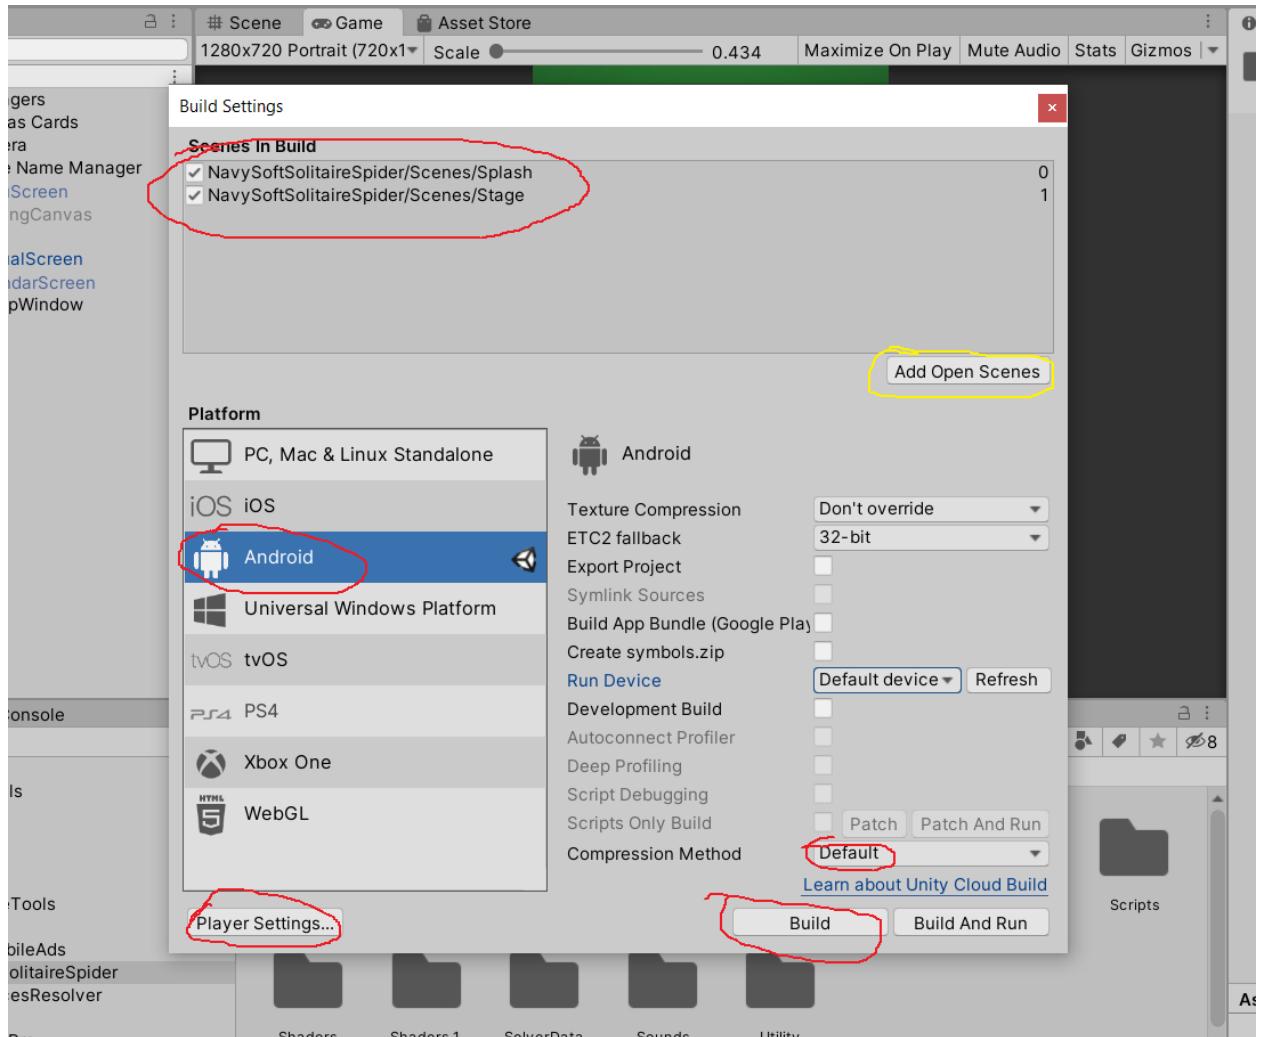

4   using UserWindow;
5
6 public class RateUsController : MonoBehaviour {
7
8     private string appleId = "123456789";
9     private string androidAppId = "com.solitaire.klondike";
10
11    private static RateUsController _instance = null;
12    public static RateUsController instance{
13        get{
14            if (_instance == null) {
15                _instance = FindObjectOfType<RateUsController>();
16                if ( instance == null ) {
17

```

### 3.How to build for Android:

Choose File in left top window -->Build Settings--> Android -> Playing Settings--> replace your Package Name in Other Settings tab

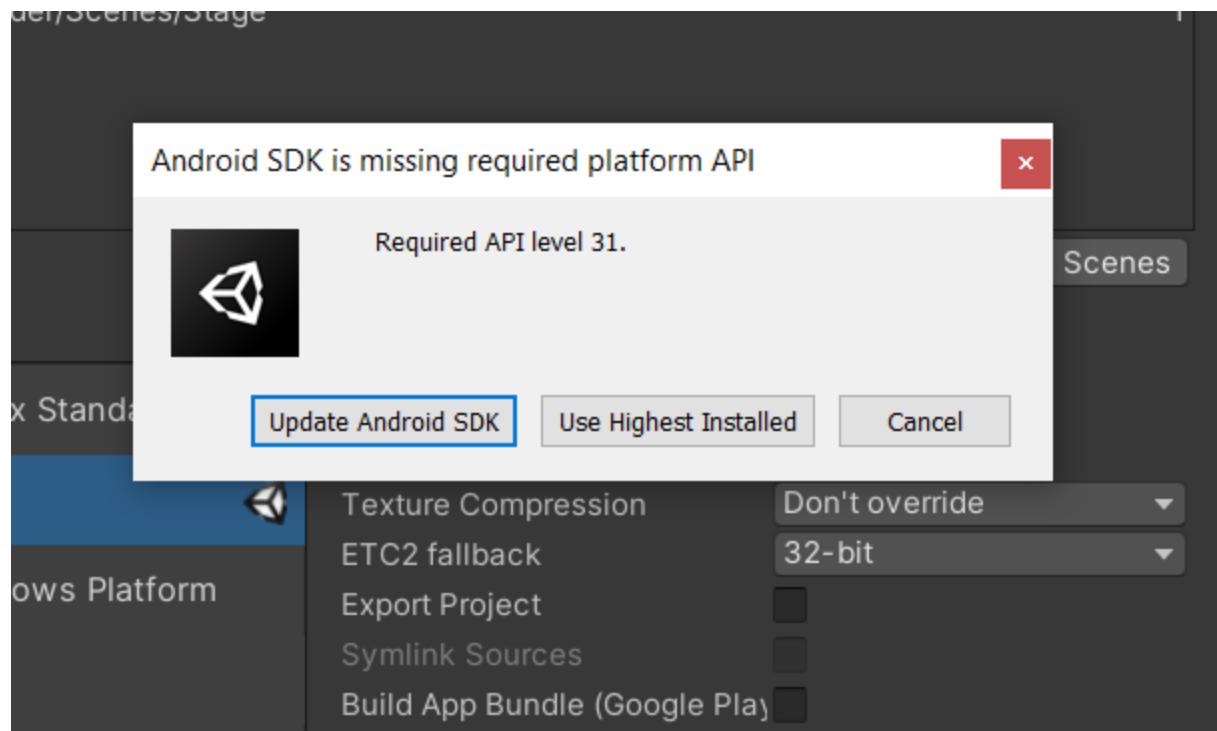

After click Build button

If have **SDK** issues please Force Resolve (right click Assets -> External Dependency Manager->android Resolver -> Force Resolve) after Play Game before build

**Set Target API Level: API level 34 and above**

After click build if show window Android SDK is missing required platform API choose

**Update android SDK button . (Window: If update error please run Unity Hub as Administrator or reset computer and open with Unity Hub with Administrator )**

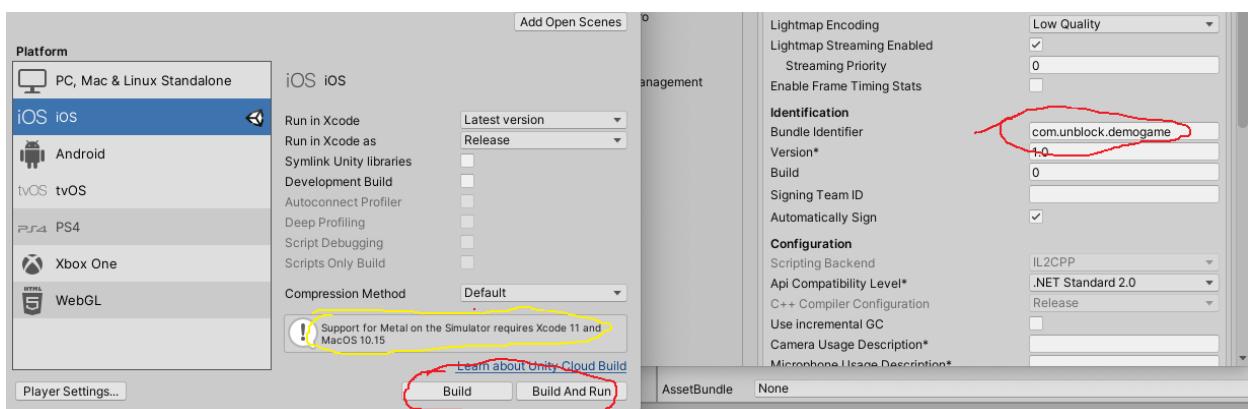

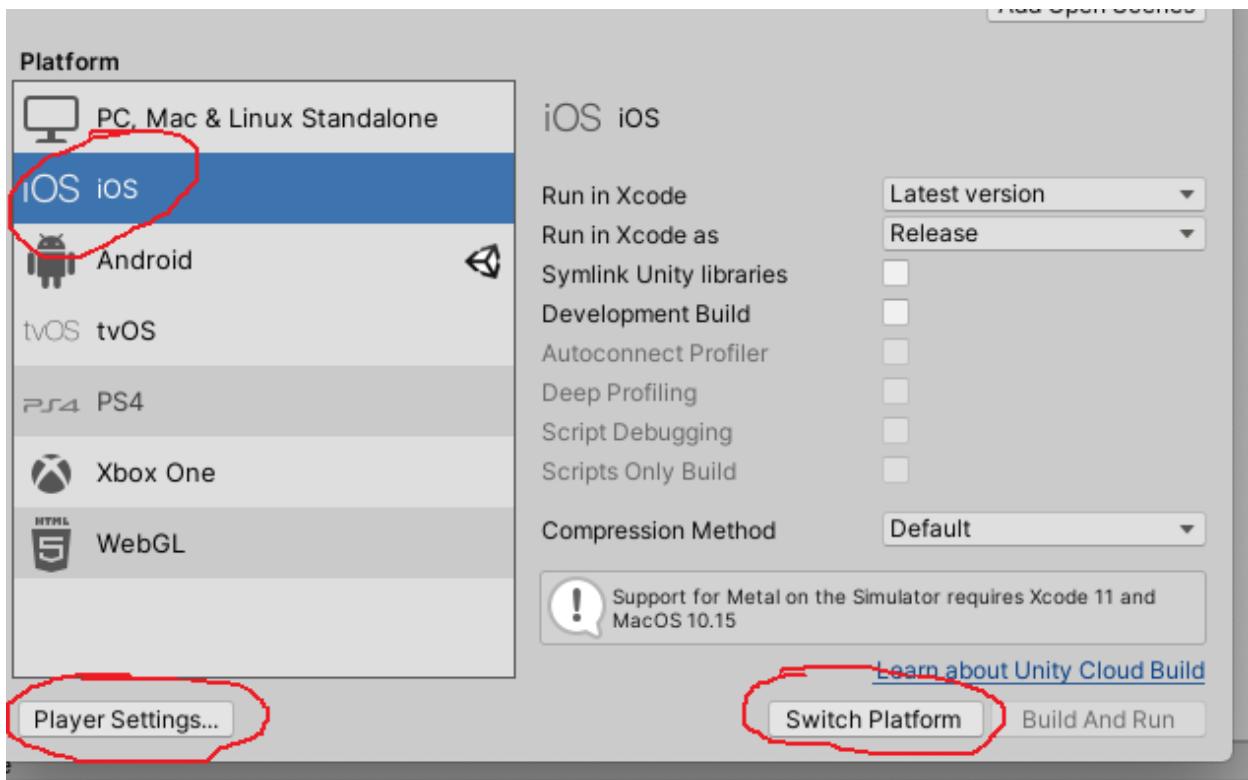

#### 4. How to build for iOS:

File--> Build Settings-> iOS-> Switch Platform->Playing Settings

Change your Bundle Identifier and Build It with Build button or Build and Run

(you need MacOS 10.15 and Xcode 11 minimum)
